

Are you an ISP? Are you a service provider? Do you want to become a sales channel and grow as a strategic partner? Then, we want you to grow with Bantel Telecom, your satellite service provider.

Whether you are a provider of Internet, data, voice or video, or if you offer the full scope of services, **BantelBAS** is the IP satellite solution with the versatility and the capacity to expand your business as far as you want.

As a US-based telecommunications service provider, Bantel Telecom's primary goal is to offer a solution of unbeatable quality, with the highest reliability in the market and cost-efficient for the operator and end-user. With its configurable **Quality of Service (QoS)** and **Service Level Agreements (SLAs)**, **BantelBAS** provides the best broadband satellite connection enabling the automatic identification, classification and prioritization of traffic across the network. This allows telecom providers to offer a broad array of flexible services and applications for their customers.

Traffic can be prioritized by protocol, source or destination address, port numbers, and other criteria. Group QoS options allow to prioritize real-time traffic (voice and video) and non-real-time traffic (data) over a shared bandwidth channel, offering the most flexible and seamless QoS capabilities in the industry.

BantelBAS is reliable, secure, integrated, and accessible. You can rely on us to provide connectivity services for:

- 
- a bank's remote branch
 - remote POPs of an ISP
 - a school for distant learning applications
 - a hotel on the coast of a remote island
 - farms of a company in the agriculture business
 - government funded sites for Internet and voice services
 - multiple sites of a private network for videoconferencing
 - residential users concentrated in a remote place
 -and any possible location where a communication service is required.

→ Cost-effective advantage

Low investment cost and low monthly recurring charge

- Small antennas 1.2 m to 1.8 m
- Fully integrated equipment solution; easy to install and maintain
- DVB-S2 standard offers a high optimization of the satellite space segment

→ Unsurpassed quality

Optimization of applications based on high performance levels

- QoS and SLAs for voice, data, video and Internet traffic

High performance with respect to previous Ku-band technologies

- Installation of a highly versatile, state-of-the-art hub, capable of dynamic bandwidth management
- Use of Adaptive Code Modulation (ACM) and dynamic FEC guarantees connectivity to an individual remote will not be affected by climatic changes

→ Reliability that is for real

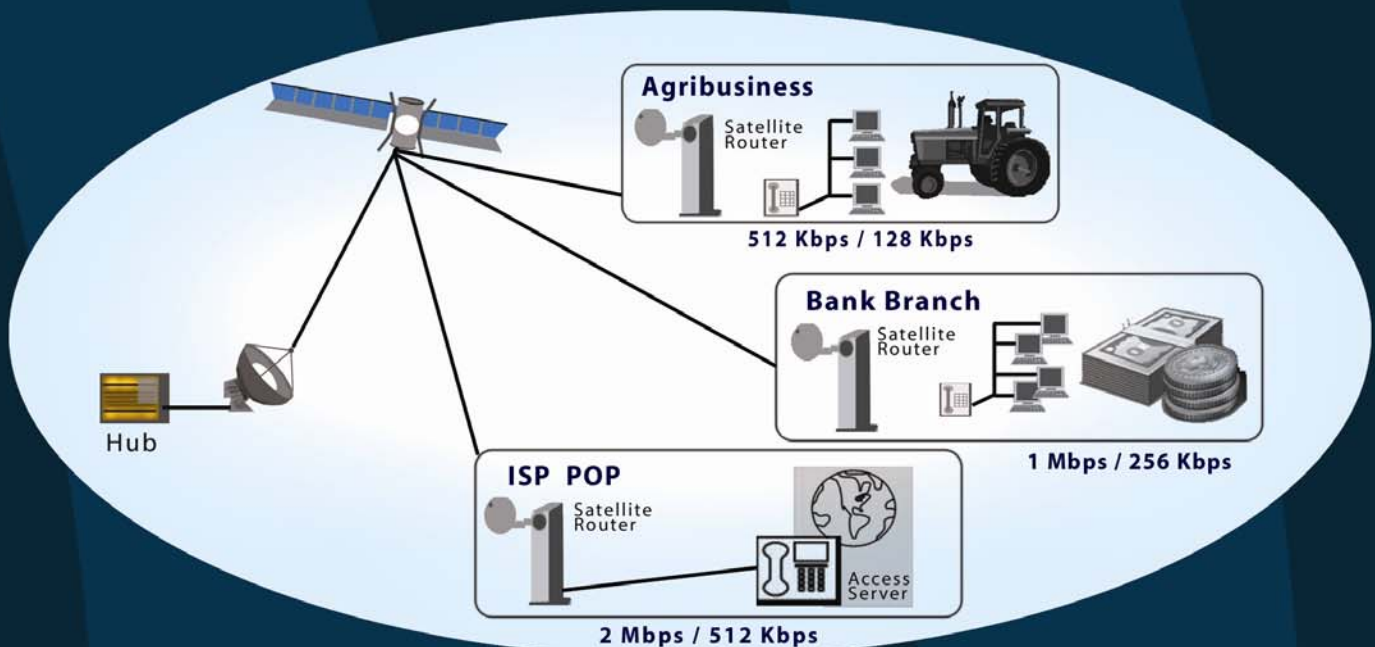

Highly reliable equipment and space segment providers

- Hughes and iDirect are global leaders in the VSAT industry; their technology has been widely deployed and tested for many years
- INTELSAT is the largest and most solid satellite operator

World class teleport located in Florida, United States

- Connectivity to the NAP of the Americas
- All components of the BantelBAS platform have been carefully selected to ensure the highest end-to-end reliability

BantelBAS: The network platform for all your satellite requirements
